

## Homework 7, Spring 2023

“To learn, one must be humble. But life is the great teacher.” JAMES JOYCE

I have neither given nor received unauthorized assistance on this assignment.

Homework 7 has questions 1 through 4 with a total of 70 points. For this assignment, *neatly hand write* your work on your own paper, digitize it, and upload it to Canvas. This assignment is due Saturday 1 April at 11:59 PM.

1. Let  $A$  and  $B$  be subsets of  $\mathbf{R}$ . Any function from  $A$  to  $B$  is called a *real valued function of one real variable*. For any two such functions  $F$  and  $G$ , define

$$F + G = x \in \text{dom}(F) \cap \text{dom}(G) \mapsto F(x) + G(x),$$

$$FG = x \in \text{dom}(F) \cap \text{dom}(G) \mapsto F(x)G(x),$$

$$\frac{F}{G} = x \in \text{dom}(F) \cap \text{dom}(G) \setminus \{x \in \mathbf{R} \mid G(x) = 0\} \mapsto \frac{F(x)}{G(x)}.$$

- 10 (a) Find an example of two *real valued functions of one real variable*  $F$  and  $G$  such that both  $F$  and  $G$  are one-to-one, but  $F + G$  is not one-to-one. Justify your example.
- 10 (b) Find an example of two *real valued functions of one real variable*  $F$  and  $G$  such that both  $F$  and  $G$  are one-to-one, but  $FG$  is not one-to-one. Justify your example.
- 10 (c) Define  $F = x \in \mathbf{R}_{\neq 0} \mapsto x + \frac{1}{x}$ . Find  $\text{dom}(1/F)$ .
2. On the set  $\mathbf{R}$  define the equivalence relation  $(x \sim y) \equiv \sin(x) = \sin(y)$ . Give an explicit representation for the equivalence class  $[1/2]$ . (Okay—the set  $[1/2]$  has infinitely many members, so no, you can't list all the members, but you can express the set  $[1/2]$  in set builder notation.)
3. Define  $\Phi = k \in \mathbf{Z} \mapsto \begin{cases} 2k & k \leq 0 \\ 2k + 1 & k > 0 \end{cases}$ .
- 10 (a) Is  $\Phi$  one-to-one? If so, prove it; if not, prove that too.
- 10 (b) Find  $\text{range}(\Phi)$ .
4. The prime factorization of an integer is unique. On consequence of this is that if  $2^k \times 3^\ell = 2^{k'} \times 3^{\ell'}$ , where  $k, \ell, k'$ , and  $\ell'$  are non negative integers, then  $k = k'$  and  $\ell = \ell'$ . Define a function  $\Psi = (k, n) \in \mathbf{Z}_{\geq 0} \times \mathbf{Z}_{\geq 0} \mapsto 2^k 3^n$ .

10 (a) Show that the function  $\Psi$  is one-to-one.

10 (b) Show that  $\text{range}(\Psi) \neq \mathbf{Z}_{\geq 0}$
